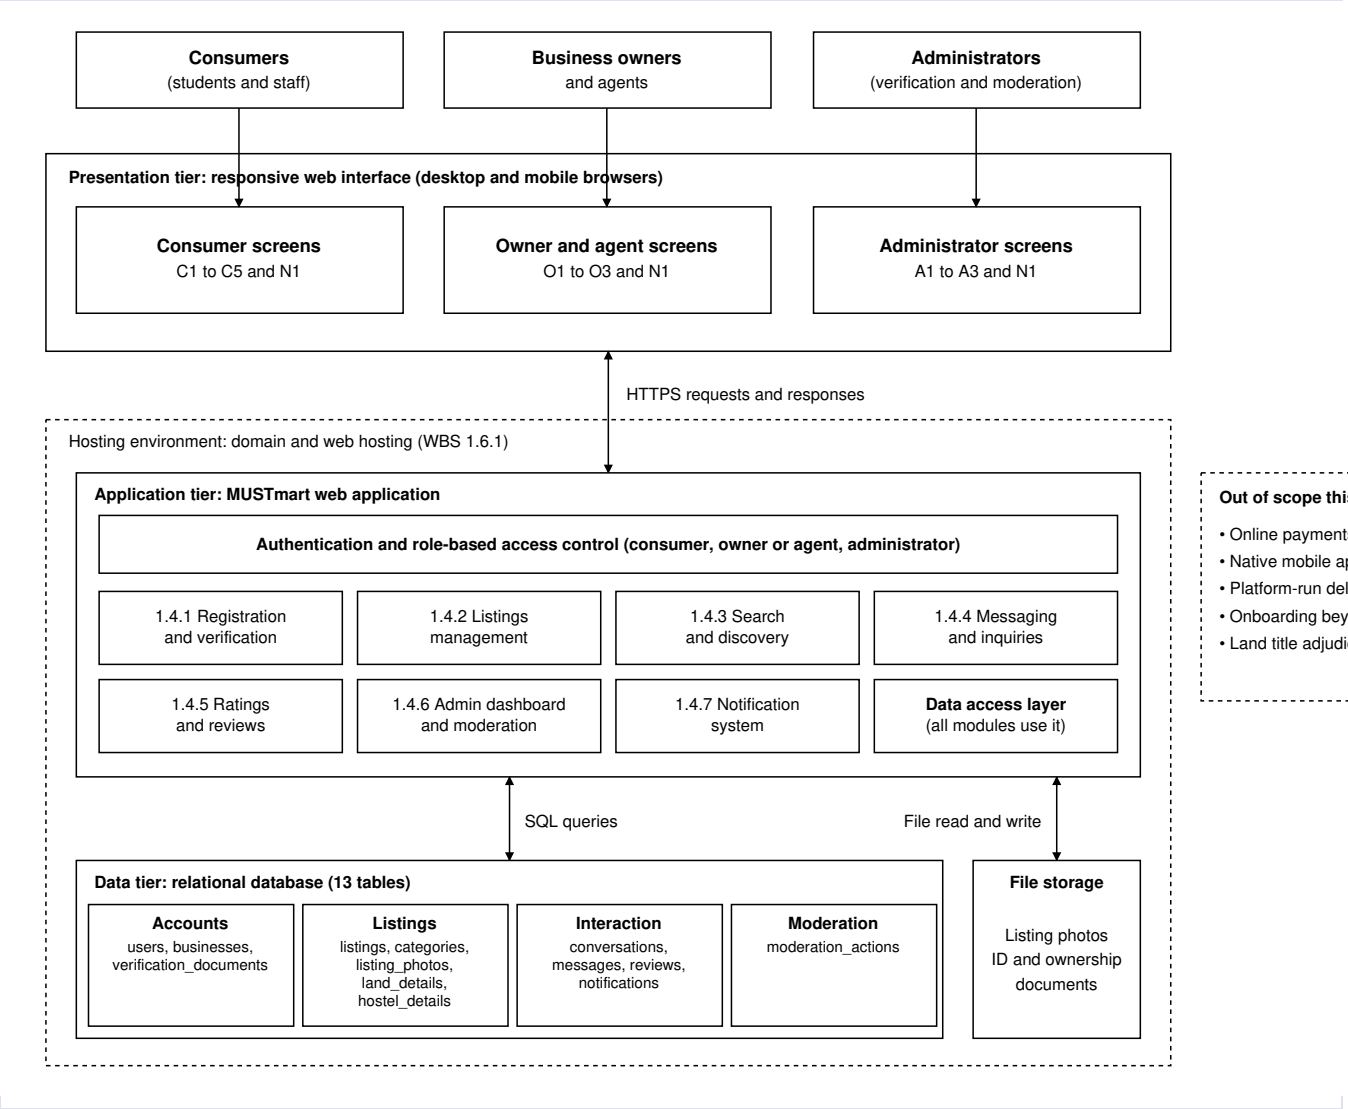
System Architecture Diagram

WBS 1.3.1 · MUSTmart · Group A · SWE3103



A three-tier web architecture: browser interface, web application, and data storage, all inside one hosting environment. Module numbers match WBS 1.4, screen codes match the UI mockups, and table names match the ERD.

Technology names are left generic because the group has not named a stack in the project documents. Notation: boxes are components, containers group each tier, dashed outline is a boundary, arrows show the direction of requests and data.
